

Civic Amenities Booking System

CABS by Modus is a robust booking system designed to be used by the public to book slots at a recycling centre. It gives local authorities and centre operators a powerful tool to demonstrate safe site operation through effective social distancing and traffic management.

Simple to use

A user visits the booking website, selects a suitable site, time slot and books a space in that slot.

They enter their name, email address, phone number and car registration number.

Any site specific restrictions will be displayed and must be acknowledged on the booking page.

They receive a confirmation email together with a copy of any specific instructions for their selected site

On arrival at the site the attendants are able to check their booking and sign off their visit.

Should it be necessary to close a site at short notice then all bookings can be cancelled and users are notified of the cancellation by email automatically.

Quick and easy configuration

CABS can be configured and operational within 48 hours of information about the operation of your sites being provided and Modus will do the rest.

You can have an effective and robust system in place to allow your civic amenity sites to re-open almost immediately. We would need

- Names and addresses of each site
- Opening times
- Duration of time slots
- Number of bookings per time slot
- Any special visitor instructions

And that is it.

Your booking system can be made available to the public almost immediately.
